Amiga Future: New full versions online

The download area of the Amiga Future was updated today. So, you can now find the following full versions online:

AC Basic Fortran

<http://www.amigafuture.de/downloads.php>

An overview of the recent uploads and changes to the download database of Amiga Future is also available from this link:

http://www.amigafuture.de/dl_recent.php

Of course we also want to be able to offer you many more full versions online, but to be able to achieve this, for you, we need your help, so ...

We are on the lookout for the Copyright holders for Amiga games and applications. Do you know of any such person or can you actively help us in our search? If so, then please contact us by email.

We are looking for extra support in order to revise the full versions download area of the Amiga Future webpage.

In particular, to check whether all those full versions formats (ADF, IPF, WHDLoad, AGA, CD releases, etc.) are complete.

In addition, a short description, in 2 sentences or less, about each of their system requirements and some screenshots need to be created.

If you want to help us, then please send us an email.

Of course the Amiga Future Webpage costs money to remain online. So, if you want to donate to the webpage, you can do this via our donations"

`title="http://www.amigafuture.de/spenden.php">donations"`

`rel="external">http://www.amigafuture.de/spenden.php">donations page.` Additionally, we are looking for advertisers for our webpage.

Amiga Future: cheats database Update

The cheats database of Amiga Future is updates weekly by David Jahn, even at first sight if it is not immediately apparent.

This is probably also due to the changes do not show up do not update the list of cheat codes database.

In the last weeks, many functions were checked for example by Strider 2, Stryx, Sturmtruppen,

Suburban Commando, Summer Camp...

In addition, new downloads were linked (those full versions, in the meantime online) and in the meantime noticed errors (wrong game name), incorrect entries, spelling, ect. fixed or eliminated.

The cheat database on the Amiga Future webpage is probably the biggest German collection for the Amiga.

This is not just about cheats. Many solutions, tips and tricks, as well as Freezer addresses can be found in this collection.

Meanwhile you can find 3420 Games Cheats and solutions in the database, and there is always more.

The database is currently completely in German. If we receive enough donations for the website, we have planned to integrate a proper online database, which will also be available in English.
