I don't think it's a Dopus5 problem. If you have a Hotkey set to execute a program with AmigaDOS, Dopus5 can open a console window to report any errors issued by the program that was started; depending on the settings in the Dopus5 command editor. The font error you are getting is from Odyssey.

I tested using a Dopus5 Hotkey to start the latest version of Odyssey (from the forums) and it works fine here.

P.S. When reporting a problem with Dopus5 (or any program), you should state what version you are using. There are 2 releases of Dopus5 and overnight compiles so there is no way of knowing what version you are using.
