Which Webkit revision is Odyssey based on?

My router developer updated it's firmware and now i can't access the routers webpages anymore and only get this message:

Quote:

Willkommen bei Ihrer FRITZ!Box

Die FRITZ!Box-Benutzeroberfläche nutzt moderne Methoden für eine optimale Darstellung auf einer Vielzahl von Geräten. Leider unterstützt Ihr Browser diese Methoden nicht.

Wir empfehlen daher die Aktualisierung des vorhandenen oder die Verwendung eines anderen Browsers.

Mögliche Browser-Alternativen finden Sie hier

Quote:

Welcome...

The ...GUI uses modern methods for optimized display on a variety of machines. Unfortunately your browser doesn't support these methods.

We recommend updating your browser or using another one.

Unfortunately none of the three (on AmigaOS) available browsers support the new methods.

I checked on a windows machine and the method where it breaks seem to be `Window.requestAnimationFrame()`.

According to [to this site](#) the version of WebKit introducing this method was 6.0 (On the linked site scroll down to "Browser compatibility").

Would it be possible to update Odyssey to WebKit 6.0?
