When you say "68k" do you really mean OS3? i.e. It uses functions that OS4 has but OS3 does not?

Perhaps both. 😊

If someone has patches that add 68k support for jamvm (like a CallNative.S linked in the post above), I don't mind adding it to my repo.

Also, if someone has patches that makes my OpenJDK code compilable for OS 3 (or MorphOS/Aros, for that matter), I don't mind adding that aswell.
