Thread

I am chasing the WookieChat crash/freeze myself now. It IS possible for WookieChat to run without crashing, because it was stable with a clean FE Update 1 install.

I made two changes and the crash is back.

1) Using the Font Prefs program I changed the WB font sizes & color (white) and added dropshadow to the desktop font.

2) Using the GUI Prefs program, I switched to the square window style theme.

These are the ONLY two changes to the out of the box install. Does anyone else (with the crash) use one or both of these settings?

Ken
