When I ran the compiled WookieChat without it's home directory, it crashed right away. When I D/L WookieChat 2.11 from OS4Depot and used the installer, it replaced my OS4.1FEu1 codesets.library with an ancient version of codesets library; very bad. I updated WookieChat with v2.12b15 and it runs but when I select a server and click connect it fails to connect.

I have never used IRC or WookieChat so it's probably better to let someone who is interrested in IRC (jabirulo?) try to debug it.

WARNING: The WookieChat installer may overwrite your codesets.library with an older version.
