It'll be added to the pile of things to put in the next update, as usual.

v6.5 isn't new, btw. I just packaged it up as a full install for new users, so they don't have to install a non-working version and update it immediately.

I'm not sure where my .cd file is, but it hasn't changed in years.

(edit: Italian translation now in the resources section [here](#) until there's an update)
