I'm porting Vice 3.1 to Amiga OS4. The version you see online on the archive doesn't work.

I ported the version 3.0 (both native Amiga OS4 graphics and SDL2) already and it works, but it's is somehow slow.

Found few bugs (as well as some AmigaOS deprecated functions) and reported to the Vice team.

At the moment i'm making progress with version 3.1. Hope to find more time to dedicate to the port.
