Here's a working MUI version:

<https://www.sendspace.com/file/3ldh83>

I got it to work by changing AllocBitMap to p96AllocBitMap, removing the use of friend_bitmap and adding a hardcoded colour format. Seems to work fine on 16/24/32 screens. I'm sure there's a better way, but at least the system doesn't freeze anymore. The MUI version is faster.
