New one, again a minor thing but still ...

Tested MickJT version with MPlayer GUI and noted a strange typo in title window (GUI)

Here it is:

"MickJT-MPlayer-1.0 1.3.0 (C) 2000-2016 MPlayer Team000-2010 MPlayerTeamTeam"

But should be:

"MickJT-MPlayer-1.0 1.3.0 (C) 2000-2016 MPlayer Team"

By the way, what was the sense to named this version as a personal "MickJT" version instead of just using the original scheme of LiveForIt including his old readme and so on ?

I understood you started from his latest version right ?

So just add your name as contributor in about window and to the readme .. less confusion no ?

And to say more, it was even strange to have a version called "LiveForIt" instead of just call it MPlayer as to end that version was partially based to the initial work of afxgroup ... not to mention we have also a MUI version ported by kas1e !!

So please just call it "MPlayer" without all that blablabla so we can replace the old LiveForIt and MPlayer versions marking them as obsolete --> 1 version = 0 confusion
