Just so know who worked on it.

for example I'm not responsible for older versions, that is distributed under name "afxgroup". I made lots of changes and take provide in improvements I made.

Also I'm not person to contact if something is not working in MUI MPlayer, or any other MPlayer build.

I think "MickJT" has always called his build MickJT, that is perfectly fine with me.

Version is just a number, it does not matter, as long know this older newer then older one.
