@Severin

Thank you very much for your reply

From shell works YT.rexx <url>

the video starts by choosing the format and then play video

I set exactly how it was written in the program guide and how you told me.

Thank you for confirming the settings.

What I do not understand and what I have to do with IBrowse once on the youtube site.

Should I simply click on the video, or should I have a menu to choose from, for example, do I do with YT?

You can put a screenshot of my settings?

What should I use to upload the image?

I can not find any entries for uploading

What I can not understand is because the voice that I create in link does not become dark black but it remains normal is right?

Thank you and sorry for my questions
