I've already replied to it :) The instructions I gave you in the e-mail are only useful if you're using the AutoPlay option. I'll repeat it here though for anyone reading this.

You only need to follow the instructions in the guide on adding the "Open with YT.rexx" menu option, but add "autoplay" to the list of parameters, and maybe rename the menu item to "Play with YT.rexx" instead so you can remember what it will do, then adjust the TagOrder list at the top of the script to put your preferred resolution at the beginning of the list (see YT.guide regarding that setting).
