I can only think you must be running an old version of the YT.rexx script. YT.rexx is working fine here with the release version of IBrowse 2.4 (dont forget to reboot after running beta!).

Granted the YouTube pages have always been heavy on the JS spyware, so I'd suggest for everyone that you go into the IB URL Prefs, make a "#?youtube.com#?" entry and turn off JS for the site.

Then you can go into the FAB menus and set up entries to "autoplay" or load the HTML links (from YT.rexx) and get to YouTube vids easy peasy.

Good luck,

PJS
