Hi, I think I understand, where and the problem of output (shell 5)

But I can not find a solution.

Initially I used mplayer-gui with the old versions of liveforiit to try to improve the player in my emulation, to synchronize the audio, etc.

Then I also associated mickJT-mplayer with mplayer-gui to see which codecs I had available etc.

I also looked at using mplayer-gui, the -no outoput option is activated,

it probably comes into conflict with mickjT-mplayer even if I do not use it.

But I do not understand how to delete the settings made and where I find the configuration file of mplayer-gui to be able to delete them.

And sorry for the kind of question

Thanks for every suggestion and help.
