The DosBox-X aims is to be more compatible than other emulators, supporting as more hardware as possible.

<http://dosbox-x.com/demoscene-compat.html>

<http://dosbox-x.com/msdos-compat.html>

As for the speed this should be the same as DosBox 074.

This version uses SDL2 acceleration on Amiga OS 4.

Note that DosBox-X is actively developed and tested, so we can expect to see improvements in the future.
