@Mick

Yep, got the mail. Is versions which you build before without D\_ARCH\_PWR4 crashes on x1000 and only with that flag didn't ? Just to be sure why crash happens.

And you probably build and generic version and x1000 one before with that flag ?

@K-L

If you in interest, i can build bunch of test versions, so to find out why it crashes. But as it didnt on my x5k, i assume its x1k specific (strange..). Also, try to tun it from RAM:, without any config file, to see if it even can printf anything.

@samo

Is that version i build works on your sam ?
