URL:

@Denii : well I have bad experience with backup HDD : from one day to the other the backup partition was gone...

@Raziel : how to make odyssey points to another location ? I dont see anything in the prefs

This SSD is a 40Gb from Corsair, turn o/f 1400 times and worked for more than 300 hours and the SSD software on the pc says it is healthy at 97% so I am more suspecting SFS2 associated with X-5000 to generate corruption.

back to my question : is there a tool to repair ?
