Yes, we need new web browser or a big updates in oddyssey or in timberwolf.

Playing yt videos with x5000 is very usable but Smtube works very very good.

If you can not afford the price of x5000 wait for new Tabor A1222.

X5000 is expensive (relative) but is great computer,very fast in Amigaos,morphos and linux,amicynix and for use all classic soft with runiuae JIT.
