Thanks for the reply,

Yes I have seen, I have tried various solutions unfortunately the problem remains in the emulator.

SMTube works perfectly

I tried to replace Download 1.5 (2017) with other downloaders but the problem remains.

After 1-2 downloads of the videos the program stops working, while the video streams continue to work.

Thanks I'm happy anyway 😊

enclose the configuration file for security, I think it's right

```
