URL:

For any developer around 

Any chance to found someone that can update the good old UnRAR ?

Latest version we have is the old 3.9.7 and it was ported in 2010 or so, however it's probably too old as it still unable to open lots of the recent archives compressed with this format...

Here is the current OS4 source based to the 3.9.7:

<http://os4depot.net/index.php?function=archive/unrar-src.lha>

A fast investigation let me found this 5.6.8 repository:

<https://github.com/pmachapman/unrar/commits/master>

Don't know if this one it's really the latest or if it's a fork from some other place ..
