I think the 5.61 version is for the full WinRAR/RAR distribution (?) and the 5.6.8 version is for the free unrar.

Probably ...

Quote:

I did some work on porting unrar 5.6.8 and it is now compiling ...

Wow, thanks a lot ... crossing fingers then 🙏

Aniway only now I read a comment on OS4Depot when YesCop talk about big RAR archives, for what i've understand apparently there is a problem extracting big files in the current official version we have (3.9.7 on OS4Depot)

I asked here for a new port mostly because in general i was unable to extract big archives from it, i though this was caused by the relative age of our version ... but maybe it was not ?

In the same comment Yescop suggest some modification for the code, maybe you might be interested to read:
