Ok, tested ... i need some more time because i had a freeze during the extraction, but quite probably because i was doing something else at computer ...

The extraction worked perfectly ,, maybe only bit slower compared to the previous version in the sense that my Sam seems suffered a bit when doing other operations .. for example play music in AmigaAMP sometimes stopped for a few seconds when UnRAR switched to the next archive to extract ... nothing dramatic anyway 🤔

Now, just another request, time permitted of course, are you able to make localization to work ?  
I'm close to finish the italian translation ;.)
