I already made a catalog descriptor file:

<https://www.dropbox.com/s/h5p46sxxfoe7ba7/unrar-cd.7z?dl=0>

I use the same names for the strings as unrar so I don't have to make too many code changes.

Writing the descriptor file took quite a bit work as there are 381 strings.

Catcomp complains a bit about trailing spaces in some of the strings but fortunately it doesn't strip them out as they are needed. It is a bit odd that formatting is included in the strings to be translated.
