put together:

- chris had no problem with an old SATA SSD
- daveyw tested a lot of them and only had succes with a Samsung 840 evo (250 GB)
- PCI SSD's are not compatible with Amiga

I bought a SATA SSD 500 GB but a more urgent need had to be taken care of; my wife's laptop (compaq presario CQ71) harddisk died, i replaced it with the SSD and did a clean Window 10 install. Windows 10 got remarkably faster, that is for sure.

I surely will have a try later.
