@kas1e

The crashes happen on my X5000 as well. I guess the reason might be the same as huno's RTCW Reborn. What do you say?

@bszili

Do you plan to compile those games to use latest versions of GL2ES or GL4ES for AmigaOS 4, or even the Warp3D Nova? I don't know how much work needed, but I guess they will gain some speed and better graphics, based on the updated implementations.
