EDIT: is this changing the picture (incl. that one eventual force crash in OpenJK as reported by kas1e and petrol) for anybody who suffers from the issues?

<http://www.goldencode.de/tmp/mgl.zip>

Crash still there for sure. Reproducible from first try.

Is it possible for you to build 2.22 one ? I can't rollback to see that code via web , but at least we will easy understand if issues with crash start to happens with changes done between 2.21 and 2.22 or between 2.22 and 2.23. That will reduce questions for sure.

Also the same 2.22 can be tested and for jedi as well.
