@saimo I do not like emulation. I prefer native software. If you change your mind, please let me know.

I understand where you're coming from but the initial post said "It's for stock A1200." & the title of the thread states "new AGA game in the works" so it shouldn't come as a surprise to anyone that it won't run natively under OS4.x.

Good news is that it does play fine on my X1000 with E-UAE as well so all good 😊
