@broadblues

Thank you for the answers.

Quote:

Why are you specifying an app? Unless for some reason you want to load the multiview binary in with the binary datatype

Try

```
@{"Text" "PATH:To:my:textfile.txt"}
```

Because the AutoDoc is pretty scarce on information or examples, so i had to try my way through the usage.

I have now changed it to

```
@{"AUTHORS" Path:to/AUTHORS"}
```

Nothing...

I don't believe the datatypes need a suffix to work, does it?
