Thanks for the good feedback.

I tried to convert the MUI texteditor class to ReAction. I almost had it working, but gave up on it.

I want a full-featured and fast editor. Classes kind of limit some things. Jamie Krueger is running into some problems with his AVD that the richeditor.class is causing.

Localization is done, albeit very basic.

The files are simple XML so anyone can make new ones.

I don't program on my Amiga because of the lack of a good editor. I program on Windows with EditPlus, turn to Amiga, FTP code over, compile, run. Very tedious and slow. CodeBench is too slow to start up. I will be able to write on my Amiga soon.

struct has vertical selection. Hold Alt key and click and drag.
