I absolutely agree: MultiRen is a very powerful renamer! The only "issue" I have with its functionality, is it's complexity when a quick multi-rename is needed. Should you have access to a mac, try [Namechanger](#) (donation ware) or the integrated Multirename in Finder. It works a bit like "Replace" in the Renplacer Tool of MultiRen, but with less clicking, instant preview.

But at the end you are right, I did open this thread to advocate less duplicate projects and as an inspiration for devs. So I will cross the file rename out the list.

About the bug, I will try to duplicate the error and send it to Daniel.
