- Various shell id taggers wich miss many functions and tags

All I've ever needed was id3 ([http://os4depot.net/index.php?function ... /filetool/id3edit-os4.lha](http://os4depot.net/index.php?function=.../filetool/id3edit-os4.lha)), which must be one of those referred to here. It's command line, but since I always use it from a script, that's fine with me. And it has always worked fine.

But I guess those who want something else must need specific features - which ones?

Best regards,

Niels
