As far as I am aware, the available mp3 taggers available atm are:

- * id3editor
- * qtagger
- * id3tagLibGUI
- * Various shell id taggers
- * MusicTagger
- * aTunes tage Editor

Music-Tagger was the only one which worked straight from the package. (I didn't try any command line taggers.)

Regarding the layout and functionality, I like how they solved them in mp3tag (www.mp3tag.de) for MSWin and on Tag Editor for macOS (www.wondershare.net), besides iTunes.

I liked the [Tag Editor for Mac](#)'s list approach. It seemed very powerful way of editing the tags. I'll have to investigate if all those list features/actions (images and pop-ups) are possible with Reaction.
