Hi

About tag editor have looked at these on os4depot?? i remember to use few of them back in the first days of amiga os4 and they worked fine..

<http://www.os4depot.net/index.php?function=search&tool=simple>

About network stack what are looking for exactly? RoadShow isn't enough?
what i would like to see is a proper way to create in a simple way shared folder accross the network between amigas and other system (from amiga to amiga and from/to amiga or other systems..)

About compare folders dir, have you looked at this?:

[http://www.os4depot.net/index.php?fun ... /filetool/comparedirs.lha](http://www.os4depot.net/index.php?fun.../filetool/comparedirs.lha)

Hi,

yes I have had a look at the ones on OS4depot. 😊 The only one with GUI working properly is Music-Tagger but it also deletes all the Tags it does not support. The second Utility is id3Tagger (With id3TaggerGUI) only works partially. Sometimes some tags are not written to the file, or it brakes the file.

Compare dirs is a nice approach, but really basic and it becomes cumbersome to use. Once the directories are scanned, there is no way to move, copy, delete or sync the directories or check the subdirs. So it is only partially helpfull. To have a idea about what is possible on other platforms and nice to have look at:

www.deltawalker.com

or

<https://www.araxis.com/merge/>

I would pay 100Eur to have that on Amiga. I know our market is small though.. :P
