Instead we put numbers of the counts of profile restarting to the buttons itself, i.e. it will be like this:

Will think about that. Initially there was only one button called "Reset" that a) printed counters, b) reinitialized them. What do you think about 1-button solution? We could sell to Apple.

Quote:

But dunno how to deal with that issue that when you run glsnoop, and then hit "finish profile #1" (but at this moment didn't run any GL apps), we still have in log that first small profile when running GL app after that.

If you mean the final, end-of-context summary, I consider it a feature. It's also useful in a sense that there are error counters, in my opinion.

Quote:

Maybe just ghost all the buttons until any gl app runs ? And only then allow pressing "finish" ?

This should be doable.

BTW there is a button help now.
