Not sure if this is the same issue or a new one. Today I used Odyssey and downloaded some lha files from OS4Depot and every time it seemed to download ok. But when I tried to unarc the files, I got the following message for every file:

Warning: the archive file xxxxx.lha has some corrupt data!

So I downloaded the same files using IBrowse and they all unarc fine.

After reading through this thread, I tried NetSurf 3.9 and got the same results as Odyssey.
