@Capehill

"It sounds doable, so I will try it when I find more free time."

Great, thanks!

"Which one is better, "stop time" or "duration" parameter?"

IMHO "duration" is better.

- more human as in "I record **for** X seconds"

- independent of eventual start delay

"I suppose millisecond resolution would be sufficient."

I think even seconds are sufficient for this purpose, but yes, a higher res. than msec is definitely total overkill.
