Hi walkero,

Thanks for your application I have tried version 1.3.

It works very well with Emotion Player but it's a bit slow.

While it works very well with MickjT-player it is very fast but after a few moments it interrupts the video, I think it is an audio problem the options used are -vo sdl and -ao sdl

At the moment I have only tried twitch.tv.py

I remind you that I use Winuae with AmigaOS 4.1FE maybe this can help.

If there is no solution, thank you anyway.

If you need the log or my configuration file I will gladly post it.

Thanks.

here the video if it can help
