@Walkero

Is x1000 was with radeonhd3.6 and all settings was set to maximum in rctw reboorn ?

@all

Is there someone with x1000 who want to test some things ? Need to run reborn on all maximum settings, then run in another screen latest sysmon from z-tools, and in last tab "system" there will be info about video memory, so to make screenshot of sysmon with video info when rctw reboorn running at max details
