Uhh, sweet...an easy enough solution for me to try.

Hmm, well, the two lines where it crashes are 82 and 88, so i'll try those first.

But, wouldn't this be a bug in ScummVM's Amiga part then?

Or even a bug in the system itself?

Or could it be simply that ScummVM's Amiga part is old enough to have outlived the coding necessities of the current system?
