here you can find a very complete guide on how to emulate the 4.1 FE

<http://eab.abime.net/showthread.php?t=91368>

FlowerPot is a great program should not give you problems.

here you can find the first part of the video if it can help you

<https://www.youtube.com/watch?v=DQ5zggEDHug>

"select 720hd" in youtube settings if you see the video in low resolution so you can see it well.

If you read the guide you will be able to do many things with the 4.1FE.

There are many other videos in the channel to have fun with the amigaos 4.1 FE.

I hope it's useful.

In most cases you will see videos called "tests".

In reality some videos are very old but in reality everything works well.

I stopped updating the guides because few people emulate this system.

Here you can see winuae that uses RunInUAE inside winuae itself, also in this case the configuration has been updated and works perfectly.

I have to thank for this many users who attend this forum for the help that has always been given to me.
