Thanks for the help. The Flower Pot UAE config already has 'UAE Zorro III' set; which is a good thing because there is no Save button (Just Start, Cancel and Quit.

The SYS:Storage/Monitors directory in the installed OS4 only has NTSC, PAL and Multisync files so I copied the PicassoIV (and info) files from the Classic OS4 install ISO. There is no BOARDGFX variable in the PicassoIV info file but there is a BOARDTYPE variable. Should I add the BOARDGFX variable and setting or use the BOARDTYPE variable that's already there and change the setting to uaegfx for that?
