Transferring settings

URL:

I have been, up until now, using the OEM version of Ibrowse2.4 that came with OS4 Final. Even though I have a registered copy of 2.3, and therefore a keyfile.

I have just installed IB2.4, and copied the keyfile across, and I am posting this from there.

My question is, what files do I copy across from sys/utilities/Ibrowse to transfer my settings?

Such as bookmarks, settings, and passwords etc.

Is there a particular directory which stores all this, or is it in an env-arc prefs file?

Any help much appreciated (Severin?)

ps. Maybe just me but it feels faster. 😊
