Actually, it should undo the 1234 and leave you with the 1. If it undoes all the 11234 in a single operation, that is a bug.

Edit: No, thinking about it, what you describe is correct behaviour. EditPlus does the same, and i implimented undo to work more or less like EditPlus on windows since that is my favourite editor on other platforms.

The Eclipse IDE undoes the 1234 and leaves the 1.
