Own screen or not, the prefs window opens below the editor window most of the times.

Btw, when using its own screen in 8 and 16 bit screenmode the editor becomes creepingly slow, any idea what might cause this? (My WB is 32bit)

On my setup the editor sometimes scrolls everything one character to the left every time I type a letter, which is somewhat annoying. If I turn the line number off and on again the behavior disappears.
