@ Bean :

I got a perfect route so I played with my router a little bit.

Not sure what I changed to make it worked (YES IT WORKS NOW) because the firewall was disabled. I switched the mtu from auto to 1492 because on the status window it was at 1460 for whatever reason !

Anyway, it does not solve the ADSL modem pb : people without router are having a hard time to connect to the net.

Thanks for your help (and keep tunenet going 😊)
