I don't know very much about the Kickstart modules, but I suspect that Kickstart/diskcache.library.kmod is required for JXFS.

I commented out Kickstart/diskcache.library.kmod in my Kicklayout and neither of my JXFS partitions appeared on the Workbench on next reboot. Then I restored the Kickstart/diskcache.library.kmod line to normal in Kicklayout and both of my JXFS partitions appeared again on the next reboot.
