I thought I mentioned this, but apparently didn't.

After a clean reboot (to avoid broken caches) I have now reformatted the partition again (and made it slightly smaller to avoid the far end of the disk), copied back 80GB of data without a single error and I'm very happy 😊

JXFS *is* faster than SFS, especially in directory scanning. I'd say twice as fast, but also faster in copying; about 10-20%.
