Everything which was working on the AmigaOne previously is now working on the SAM since the update. However my card reader has a tendency of stalling when trying to open files from memory card, which never happened on the AmigaOne (I haven't tried it on the AmigaOne since the update so not sure whether this is a SAM or an update issue)

I still have one USB flash drive which doesn't work - it shows up in USB Inspector as "Mass Storage Interface" (with no driver specified) rather than "Mass Storage Device".
