@kicko,

Yes, kicko, I have the same problem during AOS4.1 use.

Mean when crash 8+3 filename with often 150 go of total size on a 16go usb key.

At least, It's not the computer the common point, maybe the langage used on the computer....

I have some empty FAT32 medias, I will surely make crash tests soon !!!! But I'm sad to see Amiga with no decent FAT32 support (or reliable).
